Breakthrough in Hair Removal

Posted on September 22, 2009

"Extra" Lifechanger and **nurse Jamie Sherrill** says the new Soprano laser is revolutionizing hair removal!

NOW PLAYING:
Breakthrough in Hair Removal

RATING ★★★★★

The Soprano laser typically requires four to six treatments (or more) to permanently reduce the number of hairs that regrow. There's also no recovery time after the treatments.

Sugaring is another **method of depilation** that has been used since 1900 BC. It's ideal to have four to five days worth of growth when you have the treatment. Recipes are natural, hypoallergenic... they're even edible.

Visit **Studio Alexandria LA** for more info on sugaring.
